Meeting Minutes.

Date and Time: 17th of September, 10 am.

Team Project Number*: 35.

Attendees: Dr. Ganesh Iyer (client), Rajat Aggarwal (TA), Akhil Batra, Inturi Suhas Reddy, Pranav Samvith, Amitha G.

Agenda: Discussion about the object model created and the login portal.

Minutes:

Discussion:

- Changing the attributes of a few objects as per the client's need.
- Learnt about the database of Progress Software because we need to create a dummy database for the employee login portal.
- A self-registration window must all also be present alongside the login to enable the employees to register for the portal themselves.
- The client gave us his company preferences for the event type attribute under the event object – like movies, outings, competitions, food festivals.
- Once an admin creates an event, every other team member must AUTOMATICALLY be notified through email.
- Event analytics were discussed – graphs must be drawn on event type vs number of attendees and events that happened in the last 6 months.
- Every time an event is created, a thread is automatically created to discuss about the event and a better suited object name must be found for the object 'thread'.

Action Points:

- Update the object model.
- Work on the UI of the employee portal and create more pages.
